
Solutions engineer and systems builder with 5+ years delivering production software. Led architecture and implementation for a Fortune 500 payment integration, partnering directly with customer engineering teams from requirements gathering through production validation. Experienced across backend infrastructure, product delivery, and developer-facing enablement, with a track record of turning ambiguous requirements into shipped systems.

PROFESSIONAL EXPERIENCE

Sui Foundation

Singapore

Solutions Engineer

November 2025–Present

- Embedded with a **Korean Fortune 500** partner on a Sui-native payment integration as **technical POC for the indexer architecture** — led requirements gathering, presented architecture and benchmarks to partner stakeholders, and secured greenlight in **under one week**; built and shipped the indexer alongside their engineers from design through testnet validation.
- Architected and built a Rust deposit indexer (sui-indexer-alt-framework, gRPC) matching deposits against **75M wallet addresses** in a Kafka-sourced in-memory HashSet (**~27 GB RAM**). Used a transactional outbox so deposit processing stayed fast even when downstream event publishing lagged. Benchmarked **500-key lookups at 7.3 μs** (1,400× under gate); cold-boot at **121K msg/s**.
- Led bootcamps (**30–80 participants**) and hackathons (**up to 500 participants**) as hands-on technical instructor, onboarding builder teams into Sui integration patterns.

Tensorplex Labs

Singapore

Software Engineer, Full Stack

May 2024–November 2025

- Owned end-to-end delivery for **backprop.finance**, a Bittensor trading exchange that scaled from **\$5–8M to \$50–60M weekly volume (36% of network volume)** — continuous discovery via a **21k-member Discord** community, GA-driven usage analytics, and data-backed reprioritization (flagged 2 features at **0.1% engagement**; shipped referral and leaderboard systems to **800+ wallets**).
- Built internal tooling under production load: LLM newsletter (DeepSeek-V3 + FastAPI) saving **2–4h/week at 23% engagement**; LLM labeling platform cutting review from **>2 min to <30 sec**; reduced trading-metrics API latency from **15s to <0.5s** via Redis caching and chunked processing.

Telepathy Labs

Singapore

DevOps Engineer

Nov 2022–May 2024

- Restructured CI/CD for parallel develop-and-test workflows; automated cross-team service versioning and release tracking.

NCS

Singapore

Software Developer

Jan 2021–Nov 2022

- Delivered client-facing systems for Singapore Attorney-General's Chambers — document-overdue alerting and digital lobby onboarding, reducing deadline errors and manual processing.

EDUCATION

SINGAPORE INSTITUTE OF TECHNOLOGY

Singapore

Bachelor of Engineering in Infocomm Tech, Software Engineering

September 2022

SKILLS

- Systems & Infra:** Rust, Kafka, PostgreSQL, Redis, RocksDB, Docker, gRPC, EBS/PVC, Prometheus
- Web & App:** TypeScript, React, Next.js, Node.js, Prisma, FastAPI, Python
- Customer-facing:** Technical discovery, stakeholder presentations, POC ownership, workshop delivery
- Domain:** Blockchain indexing, Move smart contracts, high-throughput pipeline design, transactional outbox patterns
